

NCT07562022: A Study to Evaluate the Safety and Efficacy of SCTB35 in Combination With Lenalidomide in Patients With Relapsed or Refractory Follicular Lymphoma

Gender: ALL

Age: 18 Years - 80 Years

Criteria:

Inclusion Criteria:

- * Age 18-80 years old
- * Histologically confirmed Follicular lymphoma (FL) grade 1, 2, or 3a according to WHO 2022 criteria
- * Relapsed or refractory (R/R) disease to at least one prior systemic regimen that contained an anti-CD20 monoclonal antibody (mAb) in combination with chemotherapy
- * Judged by the investigator, the participant must urgently need to receive systemic treatment, based on meeting at least one GELF criterion
- * A measurable or evaluable disease at the time of enrolment
- * ECOG PS 0-2
- * Adequate organ function and bone marrow function
- * Expected survival ≥ 6 months

Exclusion Criteria:

- * Documented refractoriness to lenalidomide.
- * Have lenalidomide exposure within 12 months prior to randomization
