

NCT07562035: Endoscopic Versus Conventional Lumbar Decompression for Lumbar Canal

Stenosis

Gender: ALL

Age: 18 Years - MISSING

Criteria:

Inclusion Criteria:

Patients diagnosed with degenerative lumbar spinal stenosis based on clinical and radiological findings.

Patients presenting with neurogenic claudication and/or radicular leg pain. Patients indicated for surgical decompression after failure of conservative treatment.

Age 18 years and above. Patients able to provide informed consent.

Exclusion Criteria:

Patients with previous lumbar spine surgery at the same level. Patients with spinal instability requiring fusion. Presence of spinal infection, tumor, or traumatic pathology. Severe comorbid conditions contraindicating surgery. Patients with incomplete clinical or follow-up data.
