

NCT07563205: Observational Multicenter Study in Patients Receiving Chemotherapy and Amivantamab for Metastatic Non-small Cell Lung Cancer

Gender: ALL

Age: 18 Years - MISSING

Criteria:

Inclusion Criteria:

- * Patient over 18 years old
- * Cohort A: Patient with metastatic non-small cell lung cancer (NSCLC) with activating epidermal growth factor receptor (EGFR) exon 20 insertion treated with amivantamab-platinum based chemotherapy via an early access program in first line setting.
- * Cohort B: Patient with metastatic non-small cell lung cancer (NSCLC) with activating epidermal growth factor receptor (EGFR) exon 19 or 21 treated with amivantamab-platinum based chemotherapy post osimertinib (with or without chemotherapy) via an early access program.
- * Patient covered by the French National Health Insurance system or by an approved third-party payer
- * Patient who does not object to the collection of their personal data for research purposes (an information sheet will be provided to all living participants; for deceased participants, documented non-opposition in the medical record is not required)

Exclusion Criteria:

- * Patient placed under legal guardianship or subject to a protective legal measure
- * Patient who explicitly refuses the collection or use of their personal data for research purposes
- * Patient not enrolled, managed, or followed at the investigating site by a qualified site investigator
